

## PURE **DRAFT** APPENDIX D LIST of PURE-REGISTERED SILVER RECOVERY SYSTEMS Performance Warranty by Manufacturer/Service Agent received

The PURE Code of Practice states that processors of photographic film or paper who wish to treat their silver-rich wastewater on-site and then discharge the resulting effluent to sewer should:

1. Obtain and File a Trade Waste Permit/Approval/Agreement from the local sewerage authority/corporation.
  2. Use a Silver Recovery system registered with PURE. (To achieve registration, manufacturer/service contractor must provide PURE with a written warrant that the machine will achieve satisfactory silver recovery, i.e.< 50 ppm silver in the discharge)
- and/or -**
- obtain quarterly NATA-approved laboratory certification that the SRU effluent is < 50 ppm. silver  
(See PURE Appendix G, or contact NATA, for a list of certified laboratories).

PURE does not guarantee the performance of a Silver Recovery System.  
Users of machines or services should arrange service contracts and/or independent inspections to ensure machine performance.  
The following machines have been registered with PURE.  
The companies listed have provided a written warrant that these systems will reduce silver concentration to < 50 ppm silver at the exit side.
